

BassetPro

The Ultimate Asset Tracking System

Know what Assets you have, and where you have them!

BassetPro is a complete bar code asset tracking system that provides a reliable solution to enhance your ability to gather, organize and process information.

Handheld computers and BAR CODES are very powerful data collection tools that are used with *BassetPro*. The handheld is a tool that provides expandable memory to meet the demanding needs of asset tracking and data storage. The use of BAR CODE labels can will give you accurate information that you require to effectively manage your assets.

Implementing a system where you can track every asset's location, history, maintenance, model and serial numbers will assist you in a smoother audit process.

*BassetPro will increase your asset database accuracy to up to 98.6%.
(Reported by a BassetPro client)*

Features

The BassetPro System includes desktop software, and a handheld computer with software.

- **Import/Export** existing data from other financial systems like Oracle Financials, SAP and FreeBalance.
- **Label Global** allows you to customize field names to match your terminology and collect all the necessary information that you require.
- **Missing Asset Report** allows you to print/view what assets are missing and where they were last found.
- **Report Wizard** is a user-friendly report module that enables you to customize reports with specific fields that you require and save it as a template for future use.
- **System Status Report** is a report module that will generate a report in seconds summarizing the total value of assets, date of the last audit and what assets have been added/removed from your inventory.
- **View Owner Transactions** generates a transaction report that displays the asset history of a particular owner.
- **View Transactions** generates a transaction summary of an asset.
- **Maintenance Module & Report** allows you to track any repairs done on a particular asset.
- **Catalogue** feature is designed to set up standard manufacturers, model numbers and descriptions for fast and consistent data entry.
- **Network Capability** gives you wide access to information via the Internet. (Optional Module)

Benefits of BassetPro

- Use handheld computers and BAR CODE labels – to quickly and accurately collect data
- Know what you have, where it is, and what state it is in – helps you make the right management decisions
- Realize Capital Savings – KNOW what you own, and WHERE it is located
- Eliminate paperwork and duplicate data entries by using bar codes and mobile handheld computers to record asset information
- Minimize controllable operating costs by knowing exactly what you have, who has it and where it is.
- Stretch budgets by using assets effectively and locating missing assets within seconds.
- Simplify year-end preparation by providing details for your fixed asset continuity schedule - assisting you in maximizing your CCA/depreciation deduction

Functions

Essential data regarding your equipment (such as description, location, owner, serial and model numbers, supplier and manufacturer) is entered, either on the PC or handheld computer. The data transfer from the handheld to your PC is completely automated.

Data Import / Export

You now have the ability to import your current database, spreadsheet or text file. The interface between BassetPro and other programs, such as a spreadsheet or database, is quick and easy. You can merge in new records or restore the complete database. An optional SAP or Oracle interface & an extended version for Internet/Intranet are also available.

Association

Association is a key feature found in BassetPro and crucial for use with existing databases that do not have bar codes! You secure a bar coded label on your asset, scan it and make an association to the existing asset via serial number, old asset tag number or location. No information needs to be rekeyed. You can verify the current information, on the spot!

Move / Notes / Disposals

Moving an asset is simple. Just scan the new location, then scan the asset. The handheld computer automatically date and time stamps all changes, and provides you with a history of the asset's movements. Add in "Notes" against a piece of equipment to keep track of repairs, failures, maintenance and warranty issues.

Reports

The System Status Report is the window to your database - a one-page summary on the total number of assets, their value, and other vital management information.

Physical Inventory / Audits

A physical inventory/audit and electronic reconciliation is performed in a fraction of the time previously required. Download your complete database to the handheld computer and have it do the work for you.

BassetPro Suggested Configurations

For up to 3,000 Assets

- Psion Teklogix Workabout with 2MB, RS-232 interface
- Integrated Scanner
- 1MB flash solid state disk
- Belt Holster / Hand Strap

For up to 10,000 Assets

- Psion Teklogix Workabout with 2MB, RS-232 interface
- Integrated Scanner
- 4MB flash solid state disk
- Belt Holster / Hand Strap
